SpeakerCraft announces a "major update" to its multi-room audio platform at ISE 2017-- one adding streaming audio services, a more streamlined UI and dynamic zone grouping.

Streaming services found in the software include Spotify, TuneIn, Pandora and other popular internet radio services. The services unlock a 7th source in the MRA-664 chassis driving the multi-room ecosystem's 6 audio zones (expandable to 12 via 2nd chassis). Additionally the dynamic zone grouping feature allows family members to instantly group media zones on-the-fly, perfect for party mode or when entertainment moves from room to room.

The SpeakerCraft MRA664 is anchored by an easy-to-install ecosystem complete with 2 touchpanels and a wireless remote. The installation wizard enables configuration of the entire system-- now 7 sources and 6 zones-- from a tablet or laptop, and a companion SpeakerCraft app allows control from mobile devices.
