Control4 announces the Triad Garden Array-- a family of all-weather landscape speakers, including a best-in-class satellite speaker (GA4 SAT) and subwoofer (GA10 SUB).

Designed for placement around flower beds or around a yard, the Triad Garden Array promises an outdoor audio experience "as simple, seamless and rich as it is indoors." The speakers are designed for outdoor use, with a durable all-weather exterior and a sealed enclosure resistant to dust, bugs and critters.

The GA4 SAT resembles a landscape lighting, and blends into gardens and flower beds. It carries a 4.5-inch Ultra-Broad Dispersion (UBD) driver producing 150-degree field of coverage, minimising areas where music is either too soft or too loud as listeners move between speakers, and is compatible with 8oh, 70V or 100V systems.

Meanwhile the GA10 SUB subwoofer is designed for burying under the ground using an optional underground kit. Once buried, it only shows a discrete mushroom port above the ground. Customers can also install it as a free-standing, down-firing subwoofer via optional foot kit. A RackAmp 300 dedicated amplifier and a 10-inch driver produce full, deep bass. a

The Triad Garden Array series is available now.
