

Grimani Systems Intros Delta Loudspeaker

Written by Marco Attard
31. 05. 2017

Grimani Systems announces the Delta-- a speaker designed for use in smaller rooms (18.5-37 square metres) with digital crossover and room correction equalisation features.

The Delta has a conic section array (CSA) waveguide for constant wide dispersion and wide sound staging throughout the frequency range, ensuring every listener is immersed in the same soundfield. It is shallow at 14cm deep, and is designed for concealing behind an acoustically-transparent screen or stretched fabric room decor.

It is one of the core speakers in the Grimani Systems CinemaThree ensemble, specified for rooms up to 37 square metres.
