Blue Horizon announces the Professional Rack System (PRS)-- a modular rack system using a bespoke triple layer bamboo laminate and solid machined stainless steel uprights to control resonance.

Installers can configure the PRS to accommodate any shape or size sound system. One can also augment it with additional component shelves and spike isolation between tiers, as well as Sanctum, an isolating platform built out of high-density fibreboard (HDF). Users can place Sanctum isolation shelves beneath individual electronics.

The system is available with single (550x450x30mm) and double (600x450x30mm) shelf configurations. Shelf rods come in 3 lengths for different height components, while finishings come in either bamboo, piano black or piano white.
