Stealth Acoustics announces the CEDIA 2017 debut of the LRx83-- a "totally invisble" 8-inch three-way architectural speaker able to produce deep and natural bass response down to 40Hz.

In addition, the LRx83 promises smooth midrange and solid upper frequency for a balanced and high quality invisible speaker. It carries a 30mm midrange device, 25mm tweeter and 8-inch high-power cone woofer, and is able to handle peak power of over 300W. Constant voltage options are also available.

Stealth says the speaker is straightforward to install, since it features the same dimensions as the previous LR8g. As a result it fits neatly in any LR8 back box accessory.

"There's a good reason we are naming this new speaker the LRx83," the company says. "The ‘X' stands for ‘Expert Grade' and the LRx83 delivers the exceptional performance that integrators want in their important residential, corporate or public space projects. This 8-inch three-way speaker sets a new level of price and performance in the invisible speaker arena and is our best sounding speaker to date."
