Q Acoustics follows on the M3 and Media 4 soundbars with a first soundbase-- the M2, an audio offering the company says can carry flatscreen TVs weighing up to 25kg.

The M2 measures 55cm wide and 34cm deep, and combines two 58mm Balance Mode Radiator drives with an integrated subwoofer. It is designed for both TV movie viewing and music listening, with individual modes for each use case. A MoviEQ function emphasises the bass further to enhance movie soundtracks and videogame action.

Total output reaches 80W, and the soundbase is fully braced and damped to reduce internal vibrations. BMR speaker technology allows it to deliver 180-degree sound spread, eliminating the listening sweet spot, while a 3-mode equaliser switch on the back allows one to alter bass levels according to where the unit is positioned.

Connectivity comes through a single ARC-compatible HDMI input, digital optical input, RCA phono input and 3.5mm jack. Customers can also go wireless via aptX Bluetooth.

The M2 soundbase is available now.
