The recently announced [Sonos One](#) gets an accessory range from Sonos specialist Flexson, including a wall mount, floor stand, desk stand and a selection of replacement power cables.

The accessories are "precision engineered" to fit the Sonos One, and as such address a key design change-- the removal of the fixing-screw recess found on the PLAY:1.

The wall mount is designed for a seamless fit, and has a tilting and swivel mechanism (15-degrees down, and 40-degrees left/right) allowing installers to angle the speaker for optimum performance. One can also invert it to securely hold the Sonos One upside down, making controls and microphone more accessible in case of mounting higher up a wall.

It is available in black or white, and includes fixing hardware for brick and masonry, as well as wood and studwork. Flexson offers a choice of single and paired packs.

Meanwhile the floor stand puts the Sonos One at listening height. It also offers cable management (power and ethernet) at the base of the stand, and comes in either single or paired packs.
