Klipsch expands the plug-and-play Reference powered speaker series with the 2-channel R-28PF towers and the R-14PM monitor speakers, both promising "groundbreaking" technology.

The speakers feature easy setup to any audio source via wide range of digital, analog and wireless inputs, are turntable-, PC- and TV-ready, and feature a 24-bit/192kHz digital-to-analog converter (DAC) and RIAA-equalised phono preamplifier. Bluetooth allows use with any device, while a subwoofer output blends the speakers with any powered subwoofer.

The R-28PF floorstanding speakers push audio in a 2-channel configuration. They carry dual 8-inch copper spun magnetically shielded IMG woofers, 1-inch linear travel suspension (LTS) in Tractrix horns and custom-designed bi-amplified ultra-low noise 260W amplifiers. A digital crossover, equaliser and limiters deliver high performance without distortion.

Meanwhile the R-14PM powered monitor speakers features one 4-inch copper spun magnetically shielded IMG woofer and 3/4-inch LTS tweeters in Tractrix horns, as paired with an ultra low-noise 80W amplifier.

The R-28PF and R-14PM are available now in a black brushed polymer finish.
