PROCISE is Crestron's latest entry in commercial and residential audio. It is a PSPHD high-definition 7.3 surround audio processor.

Audyssey automatic room compensation ensures perfect speaker settings - even in non-acoustically treated rooms, says Crestron.

The elegant-looking system supports Dolby TrueHD, Dolby Digital Plus and DTS-HD Master Audio formats. An integrated HDMI switcher with HDCP support ensures DRM protected content compatability. Intelligent pairing through ethernet enables communication with PROAMP-7X400 or PROAMP-7X250 7-channel amplifiers.

Mono and stereo outputs deliver an unprocessed surround sound signal mix.

The processor contains 30 inputs in total, including XLR interface to pro-grade amps, powered subwoofers and source components.

Crestron PROCISE's tools software allows configuration and adjustments via USB or Ethernet, while customers can lock the front panel controls to prevent unauthorised access.
