ISE 2019 sees Trinnov partner with Aurea Speakers, the premium home cinema speaker brand from Spanish manufacturer LW Speakers, for the first time with a showcase featuring a Dolby Atmos System 7.1.4 with Trinnov processing and amplification.

Specially designed for home cinema installations, Aurea speakers are made with high quality components and designed according to installer needs. As such, they should make a strong companion to products such as the Altitude 16 preamplifier and the Amplitude 8m high-end amplifier from Trinnov. The speaker line benefits from the expertise in commercial cinema of LW Speakers.

An ISE 2019 highlight is the self-powered 18-inch subwoofer able to reach 20Hz. It integrates a European-built amplifier with DSP allowing different frequency cuts at 60 and 80Hz with phase inversion. Also on show are the Aurea 15-inch DSP speakers with 700+80W power helped by an internal crossover fitted with Mundorf components.
