

Jamo Updates Concert Speakers

Written by Alice Marshall
04. 06. 2019

Jamo redesigns the premium Concert 9 passive speaker series with a pair of tower speakers (C 97 II and C 95 II), two monitors (C 93 II and C 91 II), a center channel (C 9 CEN II) and surround speakers (C 9 SUR II).

The Concert 9 Series II speakers are available in three finishes (black ash, white and dark apple), and feature magnetic grilles in two natural tweed fabric options (white feature heather gray grilles, and the black and dark apple speakers come with charcoal gray grilles). Satin painted MDF baffles, polished chrome logos and stabiliser cast metal feet ensure the series is aesthetically elegant while providing exceptional acoustics.

On the technology front the updated Concert speakers include Hybrid Composition Conical Cones (HCCC) to withstand being driven hard while delivering clean and clear midrange sound. A Long Displacement Surround (LDS) surround for the woofers and midrange drivers delivers a clean transition between highs and lows, while Anti-Diffraction Waveguide (ADW) technology produces more immersive listening even outside the sweet spot. Redesigned silk dome tweeter diaphragms with extra-large surround lower distortion for high frequency and extension.

The Concert 9 Series II should ship on July 2019.
