Episode announces the Expandable Soundbar-- a means to match premium audio with TV width with a custom solution, allowing dealers to use a single product in various installs, rather than keeping multiple inexact fixed-length soundbars on hand.

The Expandable Soundbar features a three-piece adjustable design to match TVs 50-70-inch in size. The outside channels expand to match TV length and extend the soundstage to the edge of the TV for room-filling sound. It also features a three-piece metal grille and low-profile aluminium cabinet for a smooth install.

According to Episode, the soundbar delivers a fully-immersive experience with low distortion, wide dispersion and flat-frequency response, bringing amazing sound at low and high volumes. The included mounting template is designed for ease of install, and the three channels slide into place on a vibration-free mount installers can adjust before or after mounting for added convenience.
