Fyne Audio makes an entry into the residential installation loudspeaker market with the launch of five in-ceiling/in-wall models based on the budget and mid-level traditional speakers from the company.

The entry-level FA300iC and premium FA500iC home install ranges take inspiration from the technology and acoustic tuning inside the Fyre F300 and F500 series cabinet speakers respectively. Models in the FA300iC range use the same multi-fibre bass/midrange cone and 25mm polyester dome tweeter as the regular F300 cabinet loudspeakers, arranged coaxially for a compact installation footprint.

The FA300iC series is the easiest to install from Fyne, and includes a compact six-in (FA301iC) and a powerful eight-in (FA302iC). The multi-fibre bass/mid cones are terminated with signature FlyneFlute roll surround for improved LF performance, while the F300 series tweeter is mounted on an adjustable pod to offer up to 20 degrees of tilt to best direct the on-axis response to the

key listening position.

The six-in handles 100W at 89dB/W, and the eight-in handles 120W at 90dB/W. Each model comes with a low profile magnetic grille, and are paintable to match interior decor. The grilles include a scrim cloth to further conceal the drivers, and a square grille is available as an optional extra for both models.

Meanwhile the premium FA500iC series uses F500 IsoFlare drivers with the tweeters positioned at the heart of the bass driver for point source, allowing them to deliver a performance advantage over other premium loudspeakers. The crossover is tuned to take advantage of a flush-mount infinite baffle position. The series offers a six-in model (FA501iC) and an eight-in model (FA502iC), plus an eight-in version with the driver set at 15 degrees (FA502iC LCR) to the mounting surface for a off-axis installations such as home theatre.

With power handling up to 150W and 91dB efficiency, the FA500iC range offers the same dynamics and musical performance as traditional cabinet loudspeakers. They also integrate seamlessly into multi-channel systems using F500 series loudspeakers. Shallow mounting depths and easy-to-install clamps allow installations both in-ceiling and in-wall. The FA501iC and FA502iC are supplied with the option of a round or square low-profile magnetic-mounted paintable grille, while the FA502iC LCR only has a round grille.

All models in the Fyne home install ranges include a cut-out template, scrim backed grilles and dog leg clamps to secure into plasterboard walls and ceilings.
