Theory Audio Design launches seven products, with a loudspeaker lineup consisting of three high-output soundbars, the sb25 high-output multi-purpose loudspeaker and a pair of passive subwoofers.

The three soundbars, the sb65, sb75 and sb85, are designed to match with 65-, 75-, and 85-inch flat panel TVs, respectively. Meanwhile the sub12 and sub15 passive subwoofer models offer, as the names suggest, either 12- and 15-inch drivers.

At the heart of the Theory line is the ALC-1809 9-channel amplified loudspeaker controller. It offers 1800W and 96kHz/32-bit digital signal processing, making it what the company claims is the AV equivalent of a Swiss army knife. It combines the functionality of five products in one, namely a multi-channel DSP processor, high-power multichannel home theatre and distributed audio amplifier, multichannel mixing amplifier, multichannel bass manager and high-resolution loudspeaker processor, all in a 1U package.

All the above mentioned Theory products are available worldwide now.
