Soundavo announces a pair of compact-size amplifiers-- the PSA-240 and the PSA-240NET-- both featuring a a half-rack 1U chassis and able to provide 120W of power per channel at 4 or 8 ohms.

Customers can bridge the amplifiers to supply up to 240W RMS. In bridged mode, the amplifier can drive high impedance speaker lines with up to 240W for 70V or 100V loads without need for a separate transformer. The PSA-240NET adds PoE digital audio networking, allowing it to receive audio from Dante-enabled devices over standard local area networking, allowing for decentralised audio distribution through a home or building.

Both amplifiers feature a high-pass filter switch, Energy Star power, trigger in/out and power-up mode selection. All models share the same front panel design with accessories included, and
