Sound United, parent company of Denon, Polk Audio, Marantz, Definitive Technology, Classé, and Boston Acoustics, announces several Denon and Marantz products have received Roon Tested accreditation.

The certification enables customers to seamlessly stream music from Roon server or Roon Core devices to a total of 68 Denon and Marantz products, allowing for a visually rich and easy-to-use listening experience. Roon leverages credits, artist relationships, genres, lyrics, concert/tour dates and artwork to create further depth to user libraries.

Merging Roon Tested devices with local digital music files and high-resolution streaming services gives listeners a cross-platform networked music ecosystem with server apps for Roon Nucleus, Mac, Windows and Linux. Control comes through Mac, Windows, iOS and Android

apps, while networked audio output capability includes any Roon Ready, Roon Tested, AirPlay, Chromecast, Mac, Windows, iOS or Android device on the network.

"A critical aspect of the listening experience is learning more about your favorite artists, song writers and bands. It makes the music more intimate and alive," Sound United says. "In the past this intimacy was delivered by the record or CD covers and has been missing from digital online music. Roon helped pioneer this type of experience in the world of streaming music. We're very excited Denon and Marantz is now Roon Tested so our enthusiastic listeners can continue discovering more about the music they love."
