The Sony HT-G700 is a 3.1-channel soundbar-subwoofer combo complete with Dolby Atmos capability and Immersive Audio Enhancement technology, allowing it upscale regular stereo audio into an enhanced sound experience.

According to the company, the Vertical Surround Engine powering the soundbar allow it to create 7.1.2-channel surround sound despite the absence of upward-firing or rear speakers. Sony says the surround sound effect is wider over the 2019 2.1-channel HT-XF9000 soundbar, since the dedicated centre speakers enhances signal processing and improves dialogue clarity. Further improving sound is the included external wireless subwoofer.

The soundbar can handle Dolby Atmos and DTS:X soundtracks through the HDMI eARC port, and also includes Bluetooth connectivity for wireless streaming from smartphones or tablets. Pressing the Immersive Audio Enhancement button upscales regular stereo audio to 7.1.2 surround, while a Sony S-Force PRO mode "lifts" sound higher to cover the top of larger (over 55-inch) TVs. Also include are Cinema, Music, Night and Voice modes.
