

Speaker Hugs Walls Like Shadows

Unlike pulp hero *The Shadow*, the Monitor Audio **Shadow** speaker series might not know what evil lurks in the heart of men-- but it should fit the look of customers' thin plasma or LCD TVs rather nicely.

Each Shadow speaker is only 40mm thick and is mountable around or beneath a flat panel TV. Construction is in extruded aluminium, and 4" low profile bass-midrange drivers feature a flat RDT sandwich diaphragm constructed from C-CAM and Rohacell materials, with a unique concertina driver suspension arrangement.

4" low profile ABR drivers push bass further, while 1" tweeters include a rear venting chamber. The speakers also require no additional bracket for mounting, thanks to a flat-to-wall attachment.

Four models are available-- the Shadow 25 satellite, 50 tower, 60 tower (with taller and more powerful structure) and Centre (for use as a dedicated centre speaker).
