Sony Unveils the BDP-S790-- a Blu-ray player capable of upscaling content to 4K (4096x2048) resolution and even display native content (via internet streaming) at 4K resolution.

It features a dual-core processor, built-in wifi (for streaming), x2 HDMI outputs, DLNA playback 16-bit video processing and even Skype capability. Blu-ray disc playback comes with 2D to 3D conversion and 4K upscaling, while internet video playback gets improvement via IP noise reduction.

Control comes through either IR input or Media Remote app for iDevices and Android smartphones.

In addition to all HD standards, the player is also capable of 24p output and other aspect ratios-- allowing customers to duplicate all film aspect rations or convert content to 16:9 format or even 24p to 60Hz for flicker-free movie viewing.
