ConnectTRx announces the ConnectTRx wireless device family, one consisting of the TX MHL MediaHub, RX MediaHub receiver and the ConnectTRx-enabled SmartPico projector.

"Our technology enables high-speed, high-performance wireless communication among consumer electronics, PCs, and mobile devices." ConnectTRX creator Michael Seo says.

The devices are all battery powered and compatible with either Apple and Android platforms. The technology uses the 60GHz frequency band, with high bandwidth and error-correction allowing the wireless delivery of uncompressed HD video, multi-channel surround sound and control data with virtually no latency.

The TX MHL MediaHub connects to mobile devices and transmits data to TVs equipped with the RX MediaHub receiver and the SmartPico DLP portable projector. It features 854x480 resolution, 50 ANSI lumens brightness, 800:1 contrast ration and 66-inch throw at 2m (FOV 46°).
