Integra launches a pair of home theatre receivers-- the DTR-40.5 and DTR-50.5, both with Ultra HD/4K support, internet radio, built-in wifi, Bluetooth interfaces and THX Select2 Plus certification.

The DTR-50.5 is the more powerful option, with a 7-channel 135W-per-channel power amplifier (compared to the 7x110W-per-channel DTR-40.5). It also carries additional digital audio inputs, differential DAC for front channels, programmable remote control and Integra's Digital Processing Crossover Network (DPCN).

Both receivers stream music from mobile devices and PCs via wifi and Bluetooth. Integra offers iOS and Android Remote Control apps, and users can play high definition music files (in FLAC, DSD, ALAC, HD 24/96 and HD 24/192 formats) from HD music download services and on-demand services such as Spotify, Pandora, Rhapsody, SiriusXM and Tune In.

The receivers also offer phono input and extensive support for legacy digital and analog sources.

On the video side both DTR-40.5 and DTR-50.5 support UHD/4K video using either 4K pass-through or regular HD content upscaling via Marvel QDEO processor. Ports include x8 HDMI in (x7 rear-panel, x1 front with MHL support), x2 HDMI out, USB and ethernet.

Audio processing comes through 7.1 channel Dolby True HD, DTS-HD Master Audio, Dolby Pro Logic IIz and Audyssey DSX. Audyssey MultiEQ handles automated room setup (via included microphone), while Audyssey Dynamic EQ and Dynamic Volume offer further audio enhancement.

Installer options include Powered Zone 2 and Zone 2/3 preouts, x2 IR inputs and x1 output (for remote control integration) and x3 12-volt triggers.
