Arcam launches a package deal for the AVR750 receiver and DP300 Blu-ray player-- effectively providing custom installers with a discount when installing the two products together.

“This is a very attractive package option for installers,” the company says. “Independently, the AVR750 and the BDP300 are both top of the range products which complement each other perfectly in delivering an enjoyable, emotionally rich movie and concert viewing experience, complete with the highest audio and cinematic quality. It’s a winning combination for CI dealers and their customers.”

The AVR750 receiver features Class G 7-channel 100W amplifiers and handles anything from high resolution 7.1 surround sound to 2-channel music.

Meanwhile the BDP300 is an easy-to-install Blu-ray player, with control options including RS232, IP, 12V trigger and IR. Complimenting video performance are "broadcast quality" digital video clocks.

The package deal is available through Arcam's distributor, AWE.
