The AudioControl Concert AVR-6 and AVR-8 are home theatre receivers capable of handling UHD/4K resolutions (3840x2160) with 3D support, 7 HDMI inputs and 2 ARC-compatible HDMI outputs, among other connection options.

The AVR-8 features an amp with 200W per channel, while the AVR-6 offers 100W per channel. Both output at 8 ohms, and can be configured as either a full 7.1 system or a 5.1 system with 2 channels serving a second zone.

Proprietary auto room setup and room correction with equalisation come as a standard. Surround support includes most (if not all) formats, namely Dolby TrueHD, Dolby Digital Plus, Dolby Digital EX, Dolby Digital 5.1, Dolby Pro Logic IIx, DTS-HD Master Audio, DTS-ES 6.1 Discrete, DTS-ES 6.1 Matrix, and DTS 5.1.

Designed for the custom install market, the receivers are compatible with Crestron, Control 4, Savant and RTI control systems, and should start shipping during December 2013.
