Murideo's **Prisma** is a highly advanced single-in single-out video processor. Other processors might have similar features individually, says the maker… "but none of them can do it all like the Prisma."

The Prisma combines two very powerful image processing technologies - a **3D Cube Lookup Table** and the **PrismaVue.**

The Prisma's 17x17x17 3D LUT and **PrismaVue technology** give the user control over image fidelity.

The PrismaVue is similar to what is found in most image processing applications like Adobe Photoshop. It provides much higher quality sharpening than a simple sharpness control on a television. Through three simple controls, it can enhance edges, give clarity or soften video compression artifacts.
