Barco Residential shows how it plans to change high-end home AV at ISE 2016 as it joins forces with Steinway Lyngdorf and Stewart Filmscreen to bring an ultimate home theatre experience.

Dubbed "Cinema at Home," the theatre features a "Thor" Barco DCI class 6P laser projector, a Steinway Lungdorf in-wall sound system with Auro-3D support and a screen from Stewart Filmscreen. In related residential offerings the Barco stand also shows installers how to build an custom integrated rear-projection "TV" in CineScope or 16.9 aspect ratios, together with a showcase of Barco LED wall and image processing technology.

Another Barco ISE showcase is a unique "Ultimate Media Solution" powering a number of applications on a large custom-designed high resolution screen. A rethinking of the high-end home office, it allows users to work with and freely arrange multiple content sources, with an intuitive UI offering easy integration with video conferencing tools and wireless connection with the Barco ClickShare presentation system.
