Marantz presents the SR6011-- a network AVR featuring built-in wifi, 7.1.2 or 5.1.4 Dolby Atmos and DTS:X surround decoding, and 9 power amplifiers individually rated at 185W.

Customers can also use the SR6011 to power a second pair of speakers on a second audio zone running a different source to the one in the main room. Inside the AVR is a Hyper Dynamic Amplifier Module (HDAM) handling all audio signals, as well as setup via Audyssey MultEQ XT32 room calibration. Dolby Surround and Neural:X upmixing enhance Doly- or DTS-encoded content for full 3D speaker setups.

On the video side connectivity comes through 8 HDMI inputs with support for the latest HDMI 2.0a and HDCP 2.2 specifications, and the AVR is future-ready for 4K/UHD 60Hz video, 4:4:4 Pure Colour sub-sampling, HDR, 21:9 video, 3D and BT.2020 pass-through support on every input. Upscaling is also included for standard and HD analogue and video content to 4K/UHD.

Providing wireless connectivity are wifi and Bluetooth, and streaming is included through AirPlay, Spotify Connect, internet radio or local network storage drives.

An included remote handles control duties, and Marantz also offers a remote app for Android and iOS devices.

The SR6011 is available from September 2016 in black or silver-gold finishes.
