Meridian Audio continues turning into a quasi-dealer through a partnership with Cinema-ATS allowing it to add the latter's acoustic treatment solutions to its home cinema product portfolio.

Cinema-ATS offers a range of acoustic treatment solutions promising to address the three acoustic "R's," or the most common problems found in home cinema audio-- resonance, reverberation and reflection. One such solution is Cinema-ATS Complete, combining scattering panels to optimise reverberation and reflection with the Multipanel, a dual-purpose absorber tackling resonance.

The panels are just 50mm deep, allowing for installation in a wider range of projects.

Another solution is Cinema-ATS Packs-- a simplified offering with 12 scattering panels and 12 Foambsorber panels combined to optimise reverberation and reflections. Also included are subwoofer positioning guidelines to tackle resonance.

“Our new partnership with Cinema–ATS is an exciting step forward for Meridian,” the company says. “Cinema–ATS allows us to expand our offering to dealers so that we can provide a comprehensive acoustic treatment solution for home cinemas, in addition to a range of projectors from Barco Residential and our own audio systems. We are really excited to be able to expand our product offering to include this innovative and market-leading technology, and look forward to working with dealers on some exciting home cinema projects.”

Meridian also offers a complimentary Design and Specification service to help dealers plan

project schemes as efficiently and accurately as possible.
