High-end US AV brand Lexicon has a range of Dolby Atmos and DTS:X 3D-capable home cinema components consisting of the MC-10 AV processor and a pair of 7-channel AV receivers, the RV-6 and RV-9.

The MC-10 carries a 24-bit/192kHz DAC with Dirac room equalisation and 11.1-channel decoding (Dolby Atmos 7.2.4). Aimed at audiophile customers, it promises high-quality dynamics with low distortion together with balanced XLR and RCA outputs, Spotify Connects, a zone 2 with audio, 4K video, IR control and 12v triggers.

Meanwhile the RV-7 and RV-9 offer 90W per channel and 100W power output respectively. Both offer Dirac room EQ plus the proprietary Harman Logic7 up-mixer for non-Dolby Atmos/DTS:X content, as well as 11.2 preamp outputs, independent zone 2 with video and triggers, RS232, ethernet and IR control. All HDMI inputs are 4K capable with with HDCP 2.2. The RV-9 adds a a 24bit/192k Cirrus CS42528 DAC and Dolby Vision compatibility.

The three above mentioned Lexicon home theatre products are available now.
