Marantz launches a pair of Dolby Atmos AV receivers-- the SR6013 and SR5013, both offering HEOS multiroom audio support, as well as Amazon Alexa voice control via appropriate HEOS Skill.

The SR6013 is a 9-channel model, with processing for 11 channels through additional amplification. It is rated at 185W per channel, and features the Marantz Current Feedback design and HDAMs, plus separate DACs for each room. Room calibration comes through Audyssey MultEQ X32. The AVR handles all 4K video formats, with 4K/60 Hz full-rate passthrough, 4:4:4 color resolution, HDR and BT.2020, plus Dolby Vision compatibility and Hybrid Log Gamma. Connectivity comes through x8 HDMI inputs, and eARC support is included.

Meanwhile the SR5013 is a 7-channel model, with 160W per channel and support for Dolby Atmos and DTS:X systems in 5.1.2, 2.0.2, 3.1.2 or 4.1.2 configurations. It has x8 HDMI inputs and x2 outputs, and uses Audyssey MultEQ XT room calibration.

The two AVRs also offer music streaming capability, with support for high resolution 192kHz/24-bit and DSD 5.6 audio over network connection or USB, as well as streaming services such as Deezer, internet radio, Spotify Connect and Tidal. Further connectivity includes Bluetooth, wifi, Airplay 2 and ethernet, while a companion HEOS app provides control.

The SR6013 and SR5013 are available now.
