Hawking Technologies launches their compact 802.11n, 300mbps, WiFi USB networking adapter with removable antennas for easy antenna upgrading.

“...Using the latest in 802.11n technology, the HWUN1 is capable of delivering speeds of up to 300Mbps. This speed, combined with two upgradable antennas, allows users to customize the adapter to solve any WiFi range issue they have...” says Amy Tang, Marketing Manager at Hawking Technologies.

The HWUN1 connects to a notebook or desktop computer using a USB 2.0 connection and features two antennas that are easily unscrewed from the adapter.
