A number of SurgeX products are now Control4 Certified-- specifically the Axess SX-AX15, Axess Elite SX-AX15E and Axess Ready SA-82-AR residential power management solutions.

Axess is a line of IP-addressable surge elimination, power conditioning and management systems allowing the monitoring and control of power distribution platform via the internet. Installers can remotely customise, synthesise and monitor individual outlets and power settings on integrated IP-enabled devices for a grid-like view of Axess installations.

The system also allows the creation of custom sequences across the entire network, and sends out email notifications about power phenomena as based on user-defined conditions.

Both Axess and Axess Elite feature SurgeX's patented Advanced Series Mode (ASM) surge elimination, a technology the company claims is completely non-sacrificial and eliminates surge energy without harmful side effects of the ground contamination or common-mode disturbance variety.
