

PC to TV, Kramer's VP-435 Scaler

Written by Bob Snyder

Kramer's VP-435 Component/UXGA HDMI Scaler solves a number of compatibility issues in today's high tech living rooms, classrooms and boardrooms. The VP-435 can accept an HDMI signal, component video signal and computer graphics video signal from a PC, each with an accompanying unbalanced stereo audio signal. It will then provide high quality scaling of any of those video sources to a resolution that best matches the native resolution of the display via an HDMI output on a single cable.
