Atlona starts shipping the AT-UHD-SW-52ED, a 4K/UHD HDMI switcher featuring mirrored HDMI and mirrored HDBaseT with Power over Ethernet (PoE) for signal transmission reaching up to 100m.

First seen at ISE 2015, the AT-UHD-SW-52ED is part of the SW-5 switcher series. It has 5 inputs and offers 10.2Gbps bandwidth with a web server enabling GUI control over EDID, HDCP and audio settings.

Like all SW-5 switchers it offers auto-switching and remote control via IR, IP and RS-232, as well as support for multi-channel digital audio formats up to Dolby Atmos and DTS-HD Master Audio.

USB and LAN ports allow for firmware updates, while front panel controls include source selection and volume level.
