Just Add Power (J+P) announces the VBS-HDIP-3G 509POE daisy chain power-over-ethernet (PoE) receiver-- a means for installers to add multiple network devices at the endpoint or add more receivers for custom installations.

The VBS-HDIP-3G 509POE distributes UHD and 4K video over a single Cat-5e cable without need for fibre. The onboard passthrough network port allows connection of any PoE device, meaning a network soundbar, IP TV control or a single display location can be expanded into a video wall. The receiver also expands the number of PoE devices a system can handle by connecting a PoE switch to the port. As a result, installers have greater network flexibility, and any system can be expanded quickly and easily when customers want to add to the AV experience.

An integrated scalers allows viewing of video sources at any resolution, including 4K and Full HD (FHD). It also boasts control end points with RS232 and IR, together with enhanced video wall capabilities with rotation. As with all models in the J+P lineup, the receiver integrates seamlessly with FHD infrastructure, allowing installers to mix and match J+P devices to build a future-proof 4K system suiting any application requirement.
