Luxul sets to unveil a variety of products for the connected home at CEDIA Expo 2018, including wireless products, next-generation L2/L3 managed switches and other solution-based innovations.

For AV-over-IP video distribution systems, Luxul L2/L3 managed switches on show at CEDIA will include the 26-port gigabit AMS-2600, 26-port/24 PoE+ stackable AMS-4424P, 25-port gigabit PoE+ XMS-5248P and 52-port stackable gigabit PoE+ XMS-7048P. For network expansion, the stackable AMS-4424P and XMS-708P offer x2 gigabit SFP+ ports for seamless scalability and management of up to 16 switches, for a total of 384 ports and 800 ports respectively.

In addition, the AMS-2600 includes x2 gigabit RJ-45/SFP combo ports, while the XMS-5248P features x2 gigabit SFP ports. The PoE+ ports of the AMS-4424P, XMS-5248P and XMS-7048P are perfect for expanding networks utilising PoE-enabled devices, such as touchpanels, VoIP devices, IP cameras and wireless access points.

On the router side, Luxul plans to show off the Epic series-- namely the wired multi-WAN Epic 4, wired gigabit dual-WAN Epic 5 and the dual-band wireless AC3100 Epic 3. The Epic series features built-in Domotz technology, allowing installers to remotely manage and support client networks, including all connected devices, eliminating the need for truck rolls and service calls.

The routers also feature Router Limits content management, a means for customers to control the internet experience. It comes with an interface one can access anywhere, and users can choose the devices able to access the web, what websites are OK, and the days and times the internet should be available to the users.
