ProVideoInstruments announces the VuMATRIX-- a plug-and-play receiver and transmitter set complete with wireless control through the ProVideoInstruments companion application.

The VuMATRIX is a 4K receiver and transmitter set able to distribute HDMI over an existing 1Gb network. With expansion capabilities, the VuMATRIX allows users to connect a transmitter for each source, together with a receiver unit for each TV on the network. Thus, it is a 1Gb way to distribute 4K HDMI 2.0 and HDCP 2.2 over an IP network.

The set features a remote control, optical and analog audio, and can be programmed with IR commands using a universal remote. Customers can also control it via iPhone, iPad, Android or other mobile device through the PVI mobile device app, allowing users to switch TVs without any additional switching.
