AV control and distribution manufacturer Pulse-Eight launches the Pulse-Eight Ultra Receiver-- a product officially approved by Steinway Lyngdorf to work with the Steinway & Sons P300 immersive sound processor.

The Ultra Receiver is a HDBaseT 4K60 Type-A compliant receiver solution. It employs DSC technology to enable long-distance transmission (up to 100m) of HDMI 2.0 video (4K 60Hz with 4:4:4 chroma encoding) and 100Mbps ethernet over a single ethernet cable. Just 13mm high, the Ultra Receiver is ideal for discrete installation behind ultra-thin TVs.

"Today's 4K video and audio extension requirements over a long distance offer a technical challenge due to the immense data rate requirements over the cable," Steinway Lyngdorf says. "Our P300 sound processor offers the most advanced HDBaseT output available, supporting HDMI 2.0 (18Gbps) extension. We are confident of the capabilities of the Pulse-Eight Ultra Receiver which has been thoroughly validated by our engineers to work flawlessly with our
