Furutech's Pure Transmission HDMI Digital Cable xv1.3 is engineered to work with the new 120Hz LCD and Plasma standard.

The HDMI-xv1.3 cable will work in lengths up to 3 meters with new-generation 120-Hz LCD and plasma screens coming to market later this year.

Silver-plated Alpha-OFC solid-core conductors are protected with five full layers of shielding –an industry first – terminated with nonmagnetic Pearl Chrome aluminum alloy connectors with 24K gold-plated α (Alpha) contacts.
