Control4 announces HDBaseT certification for the 8x8 HDMI Matrix Switch, allowing installers to integrate the HDMI Matrix Switch with other HDBaseT compatible products.

"With Control4 Simple Device Discovery Protocol (SDDP), setup is a snap," the company says. "Once the HDMI Matrix is connected to the home network, Control4 dealers can use Composer Pro software to automatically install the applicable driver, eliminating the need to search for and install the correct and up-to-date driver for the switch or any other certified driver."

The HDMI Matrix Switch features 8 HDMI ports and 8 HDBaseT outputs, as well as 2 local HDMI outputs, 8 LAN pass-through ports, 8 stereo audio outputs, 8 RS-232 ports, 8 bi-directional IR control ports and an ethernet port.

Advanced setup options included EDID management for fast and reliable source switching and a zone lock feature allowing installers to dedicate a specific video source to a particular zone.
