Just Add Power launches the 3G UHD over IP range, with transmitters and receivers working with standard gigabit managed ethernet switches to distribute 4K/UHD and HDCP 2.2 encrypted content.

The products also handle 1080p and lower content, from any number of source devices to any number of displays over local area network. Custom installer-friendly features include HDCP 2.2 support, a built-in 4K/1K up/down scaler on the receiver for the distribution of HDMI 2.0 sources to non HDMI 2.0 screens (and vice versa) and video wall support (up to 16x16).

Lossless multichannel audio format support includes Dolby Atmos, USB over IP and Dolby downmixing to stereo analog audio.

Installers can upgrade existing Just Add Power 2G/2G+ or 2G+AVPro installs with 3G devices, accommodating the integration of HDMI 2.0 sources and screens to sites with running Just Add Power systems. HDMI 2.0 and non-HDMI 2.0 devices can run on the same network, with the 3G receiver upscaling 1080p signals to 3840x2160 for use on HDMI 2.0 displays.

Video wall support is complete with support for portrait and flipped displays, while an Image Pop feature allows the overlaying of a colour image or logo over the HDMI signal with alpha channel transparency, making it ideal for corporate clients.
