---

Atlona starts shipping the AT-UHD-CAT-8-- an 8-output 4K/UHD distribution amplifier featuring HDMI-to-HDBaseT distribution of 4K/UHD at 60Hz (4:20 Chroma sampling) together with HDBaseT transmission up to 70m.

Also included are HDCP 2.2 support, Power over Ethernet (PoE), EDID management and advanced display control functions via Consumer Electronics Control (CEC) for use with home TVs. An HDMI output allows signal pass-through and daisy-chining, while each output channel has an IR and RS232 connection.

The AT-UHD-CAT-8 is rack-mountable and fits one full-width single RU space.
