KanexPro announces the HDMX44-4K and HDMX88-4K-- a pair of HDCP 2.2 matrix switchers with 4K @60Hz in either 4x4 or 8x8 configurations, both complete with ethernet, RS232 and IR control.

The 4x4 HDMI matrix switcher includes 4 inputs and 4 outputs with audio de-embedding, the latest HDCP 2.2 specs, support for video resolutions reaching up to 4096x2160 at 60Hz and switching of less than 0.2 seconds. The 8x8 version is identical spec-wise, but boasts 8 inputs and 8 outputs.

The switchers provide 4 or 8 additional audio ports via S/PDIF connectors to support de-embedding from HDMI, and expedient firmware upgrades via micro USB ports. Signal transmission reaches up to 15m range, while installation should be easy through a sleak, rack-mounting design.
