CEDIA 2016 sees Panamax present the VT4315 Pro-- the first full-featured, vertically-mounted, IP-enabled power conditioner from the company offering a new angle on the M4315-PRO BlueBOLT-enabled power conditioner.

The VT4315 Pro mounts vertically on the back of equipment, and leverages on BlueBOLT IP control technology to control 12 outlets in 8 banks (4 individually controlled outlets and 8 in paired duplex banks). As Panamax puts it, such a configuration enables remote monitoring and reboot in either real-time or via scheduled commands from the connected equipment in the rack.

Protect-or-Disconnect surge protection and Automatic Voltage Monitoring (AVM) over/under voltage protection provide complete peace of mind, while plus-Linear Filtering promises the best performance of protect equipment. Additionally gigabit-ready and high-bandwidth coax signal-side protection safeguards from lightning damage from incoming signal lines.

The 94cm-long unit is available now from Core Brands.
