Luxul announces the Epic 4 routers-- a range of commercial-grade routers the company says is optimised for smart homes, as well as SMB and retail applications.

The routers feature integration with 3rd party embedded software, including content filtering from Router Limits and a remote management tool from Domotz. Further applications will be available in the near future, such as Ihiji remote network management tools and Luxul Roam-Assist wireless controller technology. Installers can implement any of these advanced features as required.

"Epic 4 is the first router designed as a platform to help custom installers deliver advanced services to their customers," the company says. "Our partnerships with Domotz, Router Limits, Ihiji and others help us give integrators the tools they need-both to serve their customers better as well as to add revenue to their bottom line. We're excited to bring such a great product to market that helps our dealers deliver a superior user experience and exceed customer expectations."

The Epic 4 is available in a traditional ports-on-the-front design and an AV series ports-on-the back with switchable blue/green LEDs for integration with AV racks (see XBR-4500 and ABR-4500).
