InfoComm 2017 sees KanexPro announce a set of 4K/60Hz extenders-- a transmitter and receiver set with support for HDR, 4:4:4 Chroma (8-bit colour) and flexible PoH (Power over HDBaseT).

The UltraSlim 4K/60 HDMI 2.0 Extender over HDBaseT (EXT-70SL18G and EXT-100SL18G) is a transmitter and receiver set designed for residential and commercial 4K UltraHD signal distribution. It allows installers to extend 4K UHD signals up to 70m, or obtain full HD 1080p/60 up to 100m over single Cat5e/6 cable.

Using HDBaseT technology, the UltraSlim Extender is compliant with HDCP 2.2. PoH support enables power to be received from either side of the sender or receiver, meaning the UltraSlim Extenders require one power supply. It also IR and RS232 pass-through to control 4K displays.
