Computex 2012 hosts the HomeGrid Forum G.hn Certification program launch, where vendors can submit their networking products in order to achieve HomeGrid approval.

The HomeGrid Forum expects "at least" 6 vendors to submit products for C&I testing and certification in 2012, and forum members can access the full set of Certification documents.

The certification process covers interoperability, performance and EMI.

The G.hn standards family covers networking over power lines, phone lines and coax with data rates of up to 1 Gbit/s.
