

Connectivity Solutions from Global Caché

Written by Marco Attard
29. 04. 2015

Global Caché starts shipping two new means to connect almost any electrical device to wifi and/or IP networks-- the Flex Link Relay & Sensor cable and the Flex IP with Power over Ethernet (PoE).

The Flex Link Relay & Sensor cable supports 4 configurable contact closure outputs and 4 configurable voltage and contact closure sensor inputs. It pairs with an iTach Flex wifi/IP unit to instantly put a variety of relay devices onto wired or wireless networks, with sensor input for state reporting of connected devices.

The enclosure mounts directly on a DIN rail for simple integration with external relays.

Meanwhile the Flex IP with PoE (FLEX-IP-IP) allows the pulling of power from an ethernet connection, eliminating the need for a separate power supply. The PoE version of the Flex is available on wired units only.
