HomeSeer launches the HomeTroller-SEL-- a home automation controller the company says is the fastest and least expensive SE series controller yet, with information accessible both locally and from the cloud.

The HomeTroller-SEL is compatible with most popular automation products, including light switches, thermostats, door locks, garage door openers, security cameras, water valves, AV controllers and sensors.

Customers can access the controller at home or via the cloud using any smartphone, tablet or tabletop touchscreen, with the free cloud-based myHomeSeer Remote service ensuring easy remote access without the storage of sensitive data on the cloud.

It carries 32GB of storage, while connectivity includes LAN, USB, HDMI and split audio.
