Fibaro adds HDanywhere driver support for the Fibaro Home Centre Lite and Home Centre 2, allowing installers to add HDanywhere video distribution hardware to Fibaro home automation systems.

The Fibaro system uses no cabling, instead using a combination of Z-Wave wireless mesh technology and companion modules such as dimmers, single and dual relay switches, RGBW controllers, a roller shutter module, flood and motion sensors, smoke sensors and universal sensors. The Home Centre Lite and Home Centre 2 act as a central processor, and handle up to 230 connected devices.

"We're huge fans of HDanywhere's Modular video matrices" Fibaro says. "It has everything from striking looks, CEC support and the simple yet extensive control and feedback features on offer. So simple in fact that we were able to deploy full 2-way drivers in a matter of minutes, setting a bit of record amongst the tech team!"

Fibaro-compatible HDanywhere products include the Modular and mHub ranges.
