---

Elan Home Systems enables complete home control via universal remote controller with the g1 Controller, the company's first entry into the consumer sub-\$1000 market.

The g1 allows customers to manage up to 16 security zones, 2 electronic door locks, an A/V receiver with up to 32 connected TVs, 24 lighting keypads, 3 thermostats, 3 IP surveillance cameras and up to 16 irrigation groups, all through a single handheld remote. The system is also fully expandable, and thus can grow with the customer's home or budget.

It runs on the g! system, meaning it can be further personalised according to customer requirements.

The package ships complete with the main controller, remote, IR sensor, 3 IR emitters and a serial adapter.
